

Identifying and documenting the locations of Residential Schools in Canada

Rosa Orlandini, Map and GIS Librarian. York University | rorlan@yorku.ca

Presented at CARTO/IASSIST 2018, Montréal, Québec

Territorial Land Acknowledgement

I would like to begin by acknowledging that we are located on unceded Indigenous lands. The Kanien'kehá:ka Nation is recognized as the custodians of the lands and waters on which we gather today. Tiohtiá:ke/Montreal is historically known as a gathering place for many First Nations. Today, it is home to a diverse population of Indigenous and other peoples. We respect the continued connections with the past, present and future in our ongoing relationships with Indigenous and other peoples within the Montreal community.

Introduction

Between the 1870s and the late 1990s, approximately 150,000 Aboriginal children attended more than 139 residential schools. To quote the National Centre for Truth and Reconciliation's web site: "Many never returned. Often underfunded and overcrowded, these schools were used as a tool of assimilation by the Canadian state and churches. Thousands of students suffered physical and sexual abuse. All suffered from loneliness and a longing to be home with their families. The damages inflicted by these schools continue to this day. In 2009, the Truth and Reconciliation Commission of Canada began a multi-year process to listen to Survivors, communities and others affected by the Residential School system. The resulting collection of statements, documents and other materials now forms the heart of the National Centre for Truth and Reconciliation" (<https://nctr.ca/about-new.php>).

The project arose when a colleague requested print maps from the York University Map Library showing the presence of three residential schools in Ontario. I contacted Raymond Frogner, the Archivist at the National Centre for Truth and Reconciliation (NCTR), who kindly provided me with a spreadsheet, created by the Truth and Reconciliation Commission (TRC) which had detailed information and geographical coordinates for each school. I quickly discovered that the location for Mount Elgin School (near London) was off by 1.2 kilometres. I spot-checked several other schools in Ontario and found similar inaccuracies in the spreadsheet. After several conversations with Raymond, we agreed that during my sabbatical year, I would work with the NCTR to determine the precise location of the residential schools in Canada. Early on, I had the pleasure of meeting Stephanie Pyne, the lead of the groundbreaking Residential Schools Interactive Map (RSIM) (<https://lhta.ca/residentialschools/index.html>) and the Residential Schools Land Memory Project. The schools are mapped using oral history, traditional knowledge and written sources. I also had the pleasure of speaking to Morgan Hite, who produced the Atlas of Indian Residential Schools in Canada (http://hesperus-wild.org/GIS_carto/IRS.html) in 2017 for the Tk'emlups First Nation and Justice for Day Scholar's initiative. The dataset created in this project builds upon and acknowledges the work of the Truth and Reconciliation Commission, Hite and RSIM.

Objectives

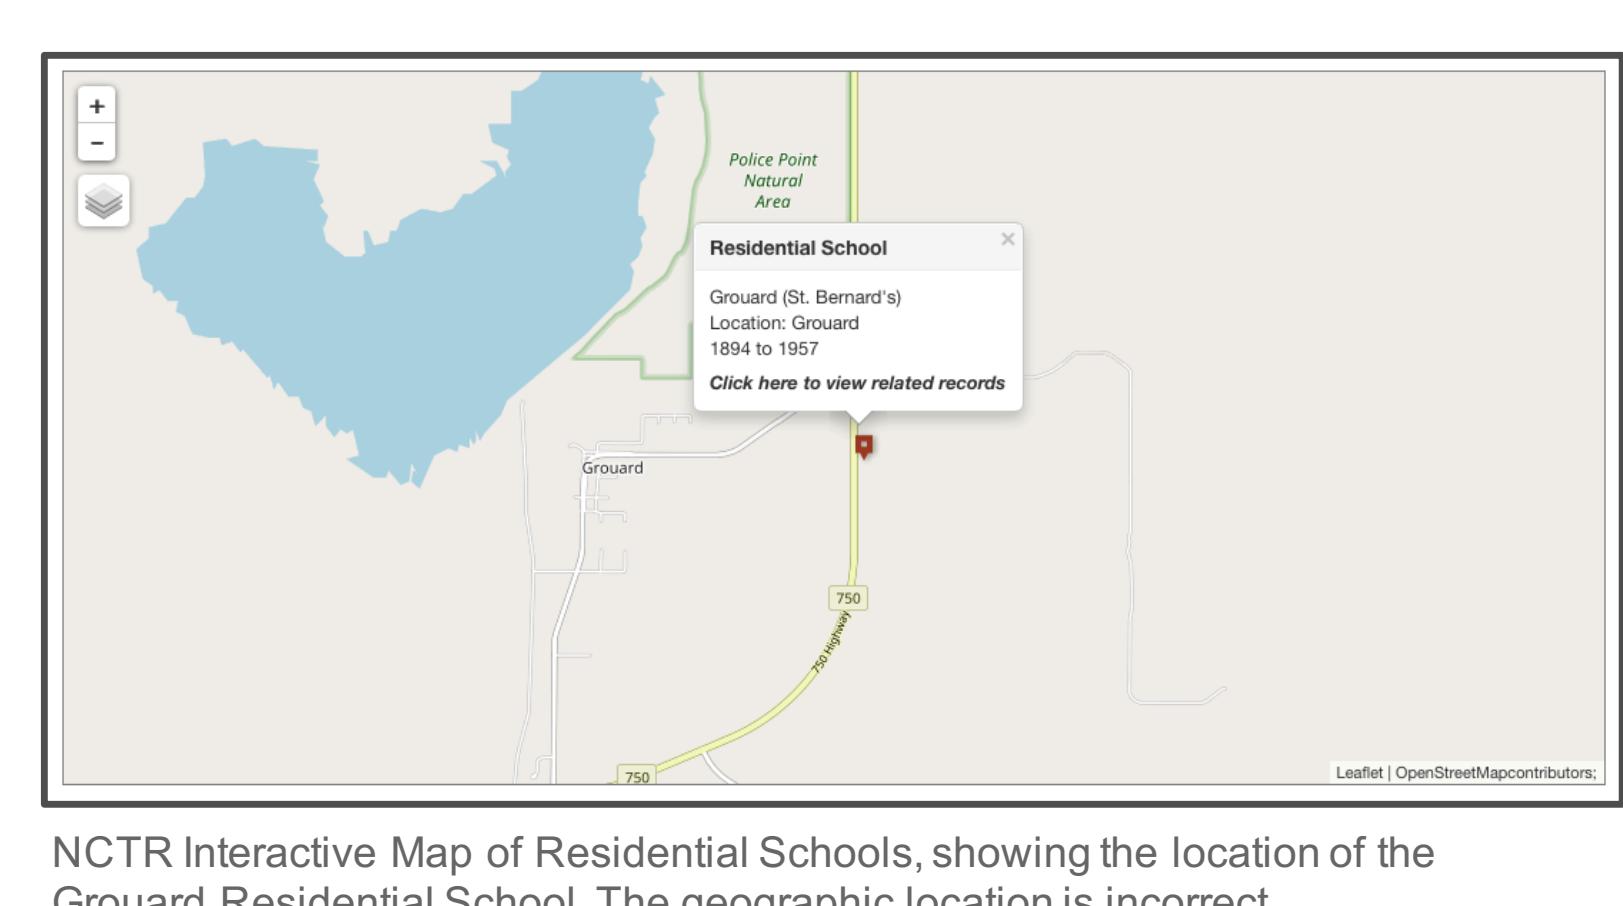

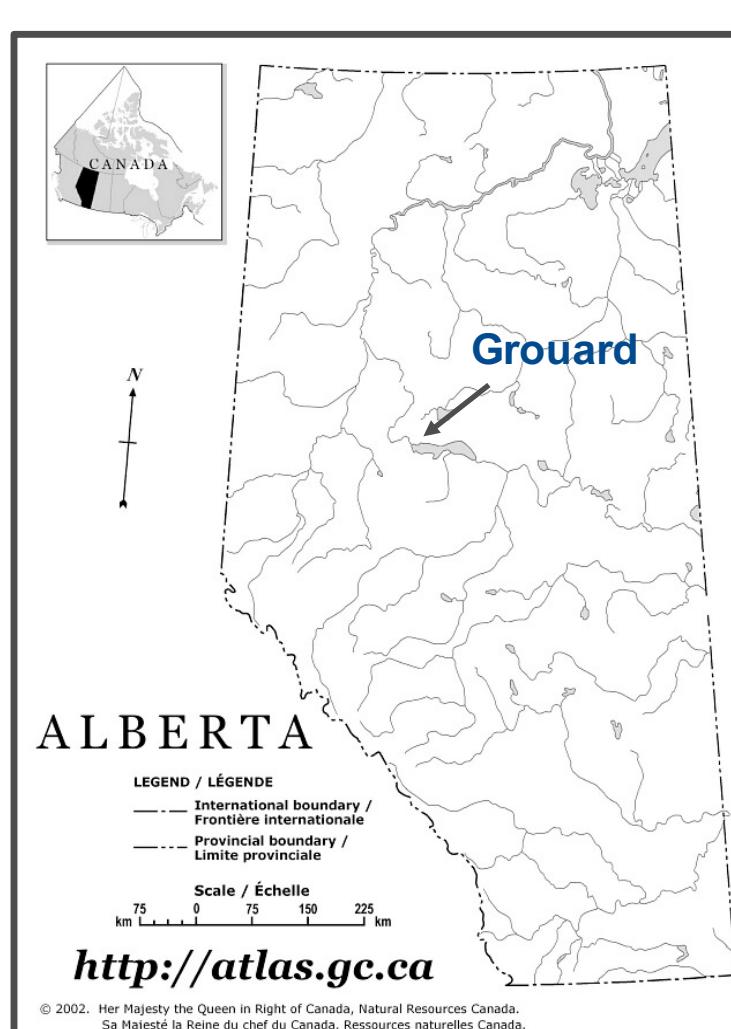

The objectives of this project are as follows:

- (1) Create a dataset that describes each school location. Each entry will include the geographical coordinates (latitude/longitude) of the school, accuracy of the coordinates (in metres), acknowledgment of the location source, location description, religious affiliation of the school, URL to a school photo, and links to primary and secondary sources (cartographic and textual) that show the location of the school.
- (2) Create a bibliography of cartographic and textual resources for each school location. Each resource will have a bibliographic citation, URLs to the resource (if available), call number/archival code, short description of the relevant content, and a list of key features that are present such as schools, cemeteries, churches, hospitals and property boundaries.

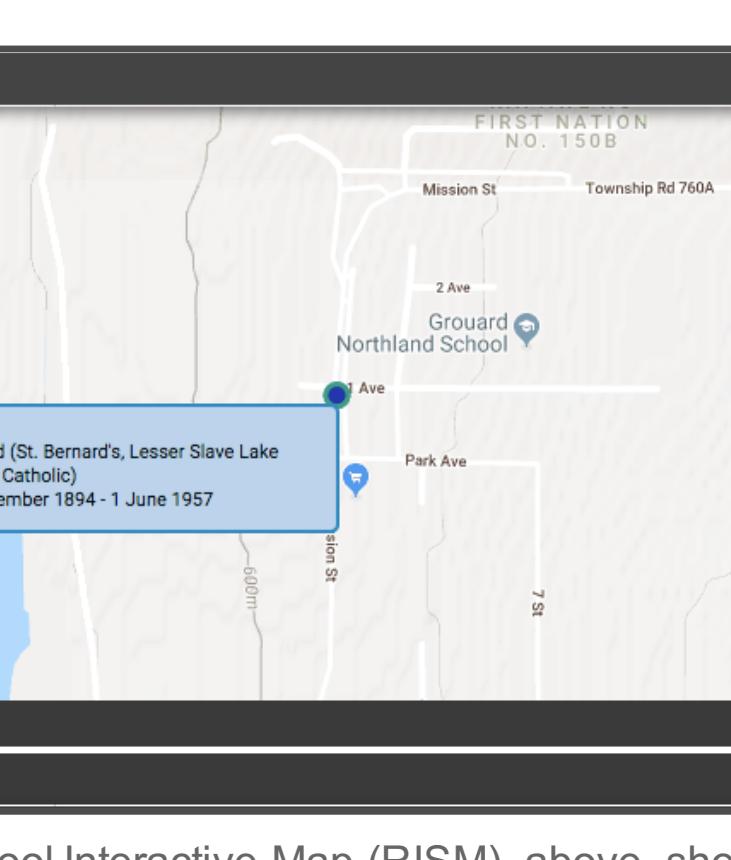

Methodology

The Grouard Residential School will be used to illustrate the methodology used in this project. The Grouard Indian Residential School (St. Bruno's) operated from 1894 to 1957. It was located in northern Alberta near Lesser Slave Lake.

Step 1: Compare the geographical locational information from NCTR, Hite, and RSIM, and review the background information from the NCTR documents portal and school narratives. These resources establish whether there is more than one location of the school. When a school is moved to a new property or location is more than 5 kilometres away, it is considered to be a unique school location.

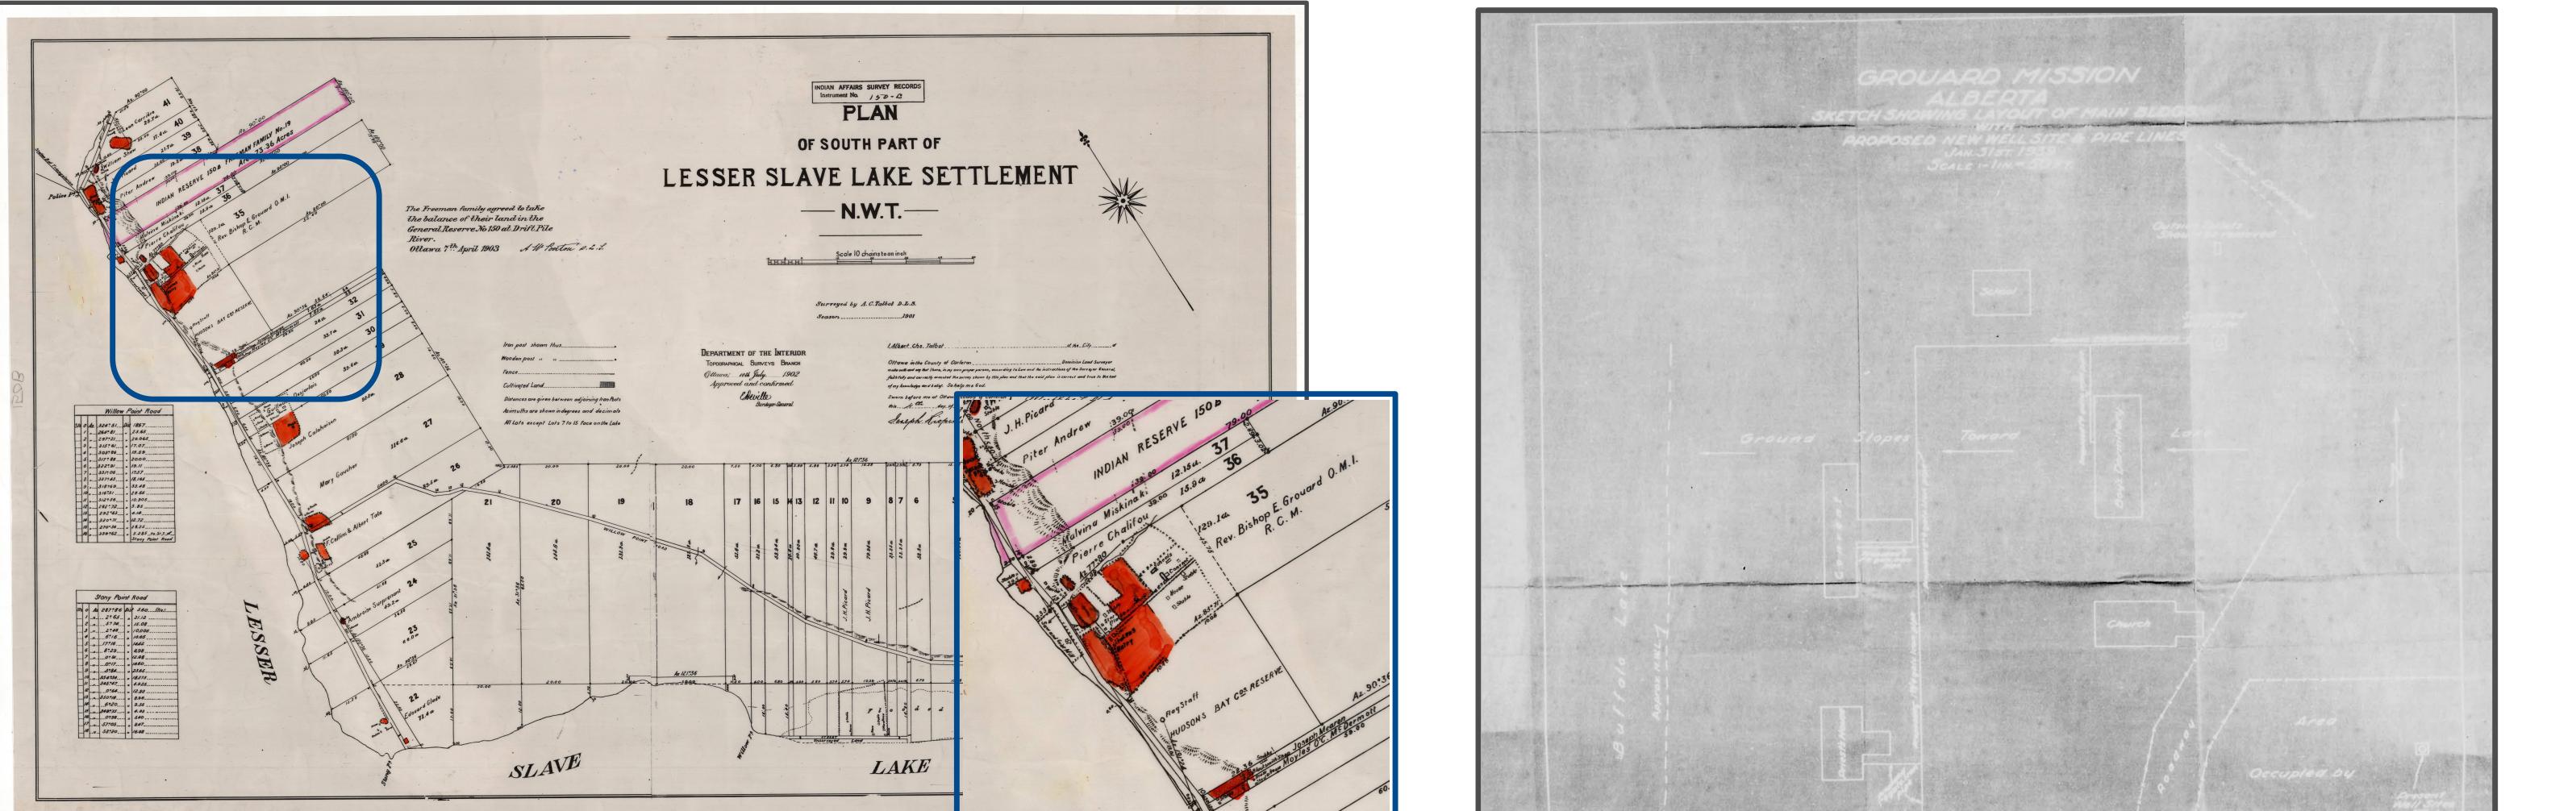

NCTR Interactive Map of Residential Schools, showing the location of the Grouard Residential School. The geographic location is incorrect.

The Residential School Interactive Map (RSIM), above, shows the residential school location with more precision. Hite'sAtlas shows that it is 100 metres west of the location determined by RSIM.

Step 2: Find primary and secondary sources that contain maps, aerial photos, survey plans, photographs, and sketch maps for each school location. Most were found on the NCTR web site, Library Archives Canada School Files Series, Indian Affairs Annual Reports, provincial and territorial archives, church archives, National Air Photo Library, and the Canada Lands Survey database. From these sources, the geographical coordinates for one of the school or residence buildings is determined. If the building still stands, that point is used. Then the school location dataset is updated with the new information.

Part of the Residential School Locations dataset of Alberta. The final dataset representing all of the schools in Canada will be similar in structure and format.

Step 3: Create a bibliographic description for each document and indicate if the map/resource has school buildings, churches, cemeteries, hospitals, property boundaries and other major features. This information is linked to the locations dataset.

Excerpt of the bibliographic database of sources (documents) used to determine the precise locations of the residential schools. The portion above lists the sources for the Grouard Residential School. The final bibliographic dataset will contain over 800 sources and can be linked to the Residential Schools Locations dataset.

Results and Discussion

The NCTR is engaged in a project to provide curricular resources to the government of Alberta about the history and legacy of residential schools in Alberta. For the project I provided the NCTR with the school locations dataset for Alberta.

To date, the School Locations dataset and the reference list has been compiled for all the provinces and territories, except for Nunavut and Labrador. Precise locations (within 50 metres) have been found for more than 95% of the schools.

The School Locations dataset will be completed soon. It will include the 139 residential schools identified by the Indian Residential Schools Settlement Agreement (TRC website, <http://www.trc.ca/websites/trcinstitution/index.php?p=12>), as well as 13 schools that were not included in the agreement. Since some schools have multiple locations the dataset will include unique records for a total of 187 locations. The bibliography will include over 850 sources. Most of the archival documents in the bibliography exist in the NCTR repository. Many of the published documents (aerial photographs, survey maps, theses, government documents and periodical articles) will be new additions to the NCTR repository.

It is important to note that the precise location could not be determined for 21 schools; this is due to a lack of a written and cartographic record. However, these schools still exist in the memories of the survivors, their descendants, and with local knowledge keepers. The NCTR is the lead in the Commemorative Marker project, the missing children registry, as well as the identifying and documenting school site locations, cemeteries, and the locations of unmarked graves of the missing children. The perspectives and understandings of Aboriginal Elders, Residential School survivors and local traditional knowledge keepers are vital to the reconciliation process.

In the next few months, I will continue to work with the NCTR staff and the NCTR Survivor's Circle to finalize the School Locations dataset and bibliography of cartographic resources. I will also help the NCTR to update their interactive maps that show the school locations. Researchers and educators will be able to apply for access to the geographic locations data and bibliography via the NCTR's newly established ethics process.
