Thrilling Tales

* From Data to the Creation of Meaning
  (Joque & Partlo, IASSIST 40, 2014)
  "Bringing the humanities to the data conference"

* Part I: data as epistemological problem
  1. Normalization of data across data sets is labour in
  a real and material way; takes time and effort
  2. We will never be able to completely harmonize
  data. politics and infrastructure will always intervene

Thrilling Tales

* From Data to the Creation of Meaning
  (Joque & Partlo, IASSIST 40, 2014)
  "Bringing the humanities to the data conference"

* Part II: data librarian as translator
  1. Data services involve literal and metaphorical translation
  with multiple fluencies (disciplines, formats, methodologies)
  2. Data librarians translate between datasets and users. We
  work among and between cultures of data use that overlap
  in some ways and not in others.

Thrilling Tales

* How do we define data services? Digital Scholarship? How do others define them?

* How do we harmonize definitions of data across library units? across the university?

* How might data librarians translate data services into digital scholarship services?

* What stories will convince our communities?

Not So Thrilling Tales

AIR Teachers' Guide

Three out of five teachers agree: curiosity is a dangerous thing, especially in students. If you are one of the other two teachers, *AIR* and *mini-AIR* can be powerful tools. Choose your favorite h*AIR*-raising article and give copies to your students. The approach is simple. The scientist thinks that he (or she, or whatever), of all people, has discovered something about how the universe behaves. So:

• Is this scientist right -- and what does "right" mean, anyway?

• Can you think of even one different explanation that works as well or better?

Thank You
